

## TheraPure™ 3752G & 3802G Recessed Side-Entry Tubs

---

Intuitive controls are within easy reach of either user (3752G) or attendant (3802G).

Adjust both water pressure and spray settings from the shower wand.

**Pure relaxation never looked so good.** Ideal for installations requiring a non-institutional look such as Assisted Living and Alzheimer's applications, the 3752G (user controls) and 3802G (attendant controls) tubs feature side-opening doors for ease-of-use and safety, while their design allows them to be recessed into a standard tub/shower alcove for a more residential appearance.

The tubs' features include auto fill and auto temperature settings. Four whirlpool jets provide soothing hydromassage in these full immersion bathing tubs. A gentle sloping backrest and contoured seat creates a comfortable setting for cleanliness and relaxation. Residents and caregivers can also take comfort in the unrivaled water purity that exclusive pipeless technology makes possible.

The seat is positioned at wheelchair height to make transfers easy for semi-ambulatory residents.

3802G SHOWN

Yes, you can.®
