

Seat and reclining bath tub AVERO Motion

Combines state-of-the-art elegant design and unique functionality ...

A concept of the AVERO Motion is to simplify bathing and showering. By means of the large side door it is possible for mobile or partly mobile persons to enter the tub independently.

Seat and reclining bath tub AVERO Motion

The design of the base frame allows all kinds of transfer hoists to pass underneath. The dimensions of the AVERO Motion are distinctly smaller than such of the most of conventional care bath tubs. One saves up to 50 cm space without reducing the tub interior dimension for a bather. The optimal adaption of the tub interior body with an absolutely safe sitting and reclining position enables up to 35% lower water consumption in comparison to conventional care bath tubs. Owing to a pre-filling function of the bath tub its foot area can be filled with up to 98 litres of water, so that the bather immediately lies in warm water, once the AVERO Motion is tilted backwards.
