SINA Comfort XXL up to 250 kg

## Shower trolley SINA Comfort

The shower trolley SINA Comfort offers people in need of care, who can not be treated with the usual devices like bathing and showering lifts, the optimal possibility to shower safely and comfortably. The transfer from a bed to a shower trolley takes place by moving the latter sideways to the bed and repositioning the resident onto the shower trolley by means of a transfer aid. The pleasantly padded shower mattress offers a comfortable base, on which the resident lies safely and comfortably. The high side rails provide an optimal protection against rolling down from the shower trolley. The dimensions of the shower trolley are planned in such a way that it is applicable in any nursing bathroom. The stretcher can be positively as well as negatively adjusted and, therefore, is also applicable for a shock position. Due to its extreme stability the SINA Comfort shower trolley is even used in many facilities as all-purpose mobile changing table.
